OUR SERVICES

SUPPLY & INSTALLATION

Protection against fire is critical. To meet insurance and risk management requirements, businesses must install reliable fire detection systems that protect people's lives and equipment from damage.

The type of suppression system used depends on the facility being protected: From IT rooms to museums, we offer specialised products explicitly designed to ensure optimal protection, with high craftsmanship and meeting quality assurance standards.

When it comes to safety, nothing matters more than peace of mind.

Experience the convenience of PFS, your one-stop shop for all electrical, mechanical servicing, and integrity testing needs. With our comprehensive range of services, you can get everything done in a single visit, by a skilled engineer.

No hassle, just efficiency!

KITCHEN SYSTEMS

When a fire breaks out in the kitchen, every second counts. Our range of kitchen fire suppression systems offers rapid and reliable solutions.

From Wet Chemical to Water Mist models suitable for any commercial cooking environment, these state-of-the-art devices are custom fit according to your customers' needs no matter how big or small their outlets or appliances may be.

Make sure you're prepared with an up-to-date system from us!

OUR SERVICES

MECHANICAL SERVICES

Existing suppression systems must be serviced every six months to guarantee reliable operation.

To ensure maximum effectiveness, we deploy experienced engineers who understand the nature and composition of these vital products.

PFS engineers are F-Gas registered and well-versed in the maintenance needs for most systems. We also ensure that when required, pressurised suppression cylinders receive either a rigorous hydrostatic testing or a service exchange to minimise downtime, guaranteeing optimal performance every time!

ENCLOSURE INTEGRITY TESTING

We evaluate whether an enclosure has adequate air-tightness swiftly and accurately with the help of Retrotec Fantastic Software. We can reliably guarantee its integrity by using a calibrated axial flow fan to pressurise and depressurise the entire room!

Ensuring its seals are in place is essential to maintaining optimal safety levels, ensuring your enclosure contains just the right amount of suppressing agent for an allotted period and no more than the allowed leakage rate.

OUR SERVICES

HYDROSTATIC TESTING

Hydrostatic pressure testing is essential for the upkeep of Fire Suppression Systems; every 10 years, it involves decanting each cylinder of its suppression gas and filling it with water. It is then pressurised to verify that no faults exist before it is refilled and replaced.

SERVICE EXCHANGE

Our experienced team is fully qualified to handle the periodic testing and inspection of pressurised gas cylinders in compliance with British and European standards. Our service includes hydrostatic testing and service exchanges - so you can be confident that your cylinder meets the required regulations.

We offer a same-day service exchange with our cylinders, and when covering systems requiring constant suppression, no downtime will occur while the old units are tested away from the site; instead, they are replaced on-site by like-for-like cylinders, guaranteeing minimal interruption of operations!

PLATINUM FIRE SOLUTIONS

We are an established leader in UK fire safety, and our commitment to customer-first service means we provide the utmost integrity and professionalism.

PFS provides comprehensive service at every step, ensuring that client sites are safe from the risk of fires.
